Application - Junior Python Developer - Gameloft Barcelona

February 2026

Dear Hiring Team at Gameloft Barcelona,

My two years of experience, complemented by a Master's in Business Analytics & AI, have equipped me with a robust foundation in Python and SQL, directly aligning with your requirements for designing and implementing web applications and server APIs. My academic focus on modern data engineering, full lifecycle management, and the architectural design of relational databases like PostgreSQL, provides a strong basis for developing scalable data models and backend solutions.

While my professional background centered on managing complex industrial projects for clients like Microsoft Data Center and BMW Group, I consistently applied analytical capabilities and problem-solving skills to ensure precision and efficiency. My Master's curriculum further deepened my expertise in building ETL pipelines with Python, implementing serverless backends, and orchestrating automation scripts, directly contributing to unit test maintenance and documentation.

I am particularly drawn to Gameloft's innovative spirit and pioneering role in mobile gaming. My eagerness to learn and adapt, paired with a collaborative mindset and strong communication skills honed through extensive client interaction, makes me confident in my ability to seamlessly integrate into your team. I am excited by the prospect of contributing my passion for technology and continuous learning, particularly with valuable skills like Docker, AWS, and CI/CD, to your dynamic environment in Barcelona.

Regards,

Elier Garcia
